

Coin Admission
Terms and Fee

Welcome to Snode!

Snode was initially a shared and dedicated masternode service. Within 3 months released to the public. Snode has achieved an incredible result:

- **3000 register users** in its platform, in which **1000 users** have invested in one or multiple masternode.
- **3,000,000\$** worth of coins has been deposited.
- A discord channel with **7000 users**, which makes Snode one of the biggest communities for masternode service.
- **40 supported coins**

We are expanding to become a multi blockchain-based ecosystem. Recently, we have received a large number of offers of listing coins on our platform from blockchain developers. Until now, which coins to be integrated into our platform mostly depends on our consideration and feedback from community. This process has been working well since early days but seems to not be optimal as moving forward. Therefore, we have developed a new plan for coin listing and this document will describe the terms for listing two categories of the coins: stable coins and ICO coins.

Registration Form:

I. Stable Coins

There are coins which are among the pioneers in blockchain community, coins which are inspired/forked by many other coins, coins which are influencing the market by its high average transaction volume. Such coins are likely to be supported in our system in almost cases. Not only do we not charge for their presences but also their presences will always be more prioritized in our further plans. We define criteria for such coins as follows:

1. Prerequisites

- Daily average transaction volume on one exchange must be equal or more than 3 BTC on the last 15 days

2. Optional (must satisfy one of the followings)

- Pioneers in blockchain community, inspired/forked by other coins.
- Daily average transaction volume on one exchange must be equal or more than 5 BTC on the last 30 days
- Commitment to roadmap, well-built services/products around the coin.

3. Integration Fee: You can choose one of the followings

- BTC: **0.3 BTC** at the moment of registration
- SND: Convert from **0.3 BTC** at the time of registration (+/- 4 hours), and discounted by **50%** (valid from 01/10/2018 to 01/12/2018)

4. Reservation Rules

- After registration, your coin will be listed on our platform within 3-5 business days
- Withdrawal on reservations of dedicated nodes takes 4-6 hours for approval.
- Withdrawal on reservations of shared node takes up to 72 hours for approval unless being filled by new reservations.

5. Notes

- After being listed, coin's level may be changed or your coin may be delisted which depends on its ongoing status

6. Registration Form

7. Other considerations

- If we are not able to perform the integration of your coin into our platform due to some technical reasons, we will return both your listing fee and your collateral.
- After listing, if we see the the instability of your network, we have the right to delist your coin and we will return the collateral required for the test masternode.
- If you are going to have a hard fork or alter your codebase without informing us 5 days in advance, we have the right to delist your coin.
- If we receive a lot of scam alerts from community about your coin after listing, we will consider delisting your coin based on voting from the Snode community.

II. ICO Coins

These coins are quite new but show potential high profit and long-term value.

1. Prerequisites

- There are coins that have just been recognized by the community.
- The coin is not marked as scammed by the community and must have active communication channels between developers and investors.
- The coin has been listed at least on one exchange

2. Integration Fee: You can choose one of the followings

- BTC: **0.5 BTC** at the moment of registration
- SND: Convert from **0.4 BTC** at the time of registration (+/- 4 hours), and discounted by **50%** (valid from 01/10/2018 to 01/12/2018)

3. Reservation Rules

- After registration, your coin will be listed on our platform within 2-3 business days
- Withdrawal on reservations of dedicated nodes takes 01 hour for approval.
- Withdrawal on reservations of shared node takes up to 48 hours for approval unless being filled by new reservations.

4. Notes

- After being listed, coin's level may be changed or your coin may be delisted which depends on its ongoing status

6. Other considerations

- If we are not able to perform the integration of your coin into our platform due to some technical reasons, we will return both your listing fee and your collateral.
- After listing, if we see the the instability of your network, we have the right to delist your coin and we will return the collateral required for the test masternode.
- If you are going to have a hard fork or alter your codebase without informing us 5 days in advance, we have the right to delist your coin.
- If we receive a lot of scam alerts from the community about your coin after listing, we will consider delisting your coin based on voting from the Snode community.

III. Instant masternode node (optional)

- Instant masternode is the type of masternodes that are sponsored by coin'd dev team. We will help you to setup one masternode for yourself, e.g. the reward of the masternode will be paid to your predefined address.
- For users, they can get in an instant masternode at any time, and get the reward of that masternode without waiting for that node to be filled.
- In case one user joins the instant masternode, we will move the corresponding amount of your coins to a new node. That user will take the reward that is worth their share in the masternode, the coin dev team will take the rest.
- Once the node is filled with user's coins, we will setup new masternodes, so there is always a ready masternode for users to jump into.
- If you choose using Instant Node in our service, your coin will be listed on our platform within 1-2 business days
